Researchers discover that in the NF1 cancer predisposition syndrome, hyperactive neurons drive tumor growth Neurofibromatosis type 1 (NF1) patients develop tumors on nerves throughout their bodies.

Drug Found To Stop Nervous System Tumor Growth

A first-of-its-kind study published recently in the journal "Brain Stimulation" measures changes in the human brain's response to a perceived threat following non-invasive stimulation of the nervous s...

Study measures changes in the brain's response to threat following non-invasive vagus nerve stimulation

The immune system may play a fundamental role along with the central nervous system in amyotrophic lateral sclerosis (ALS), also known as "Lou Gehrig's disease," Mount Sinai researchers report. Their ...

Researchers learn that ALS may be linked to both the immune and central nervous systems

Newborns, whose brains, spines or spinal cords do not properly develop in utero, can be born with neural tube defects (NTD), increasing their risk of physical disabilities, intellectual impairments ...

East African newborns at increased risk for central nervous system birth defects

New research presented recently at the European Academy of Neurology Congress in Vienna has found an increased risk of several neurological disorders in patients following a bout of COVID-19. The ...

COVID-19 increases risk of Alzheimer 's, Parkinson 's & stroke, study finds

A new large-scale study has found combining artificial intelligence (AI) and radiologists to analyze breast cancer screenings can lead to better patient outcomes, when compared with unaided ...

New study signals potential of uniting AI and radiologists

The team led by Professor Lee Jung-hyup of the Department of Electrical Engineering and Computer Science has developed an integrated circuit system converting analog signals into digital signals that ...

System measures all electrical signals in the body absolutely 'uninterrupted'

The immune system may play a fundamental role along with the central nervous system in amyotrophic lateral sclerosis (ALS), also known as 'Lou Gehrig's disease,' researchers report.

ALS may be linked to both the immune and central nervous systems

A Danish study discovered that patients leaving the hospital after a COVID-19 infection were more likely to have a higher risk of Alzheimer's and Parkinson's.
