## ~~Geometry 4.7 Congruence in Overlapping Triangles~~

The definition of congruent triangles tells us that when two triangles are congruent, each pair of corresponding sides are congruent and each pair of corresponding angles are congruent. We use three pairs of corresponding parts, SAS, ASA, or SSS,

~~Congruence in Overlapping Triangles~~

~~Ms. Griggs~~

When teaching triangle congruence, overlapping triangles appear at some point. I always teach students to draw the triangles separately before making any conclusions. This activity/demonstration helps students create overlapping triangles

# Access Free Congruence In Overlapping Triangles

and separate them to see the triangles individually. First, fold one corner of a piece of paper to form a triangle.

If two angles and a non-included side of one triangle are equal to two angles and a non-included side of another triangle, then the triangles are congruent. In the diagrams below, if  $AC = QP$ , angle  $A =$  angle  $Q$ , and angle  $B =$  angle  $R$ , then triangle  $ABC$  is congruent to triangle
