INTRODUCTION TO APPLETS - doc.lagout.org

TableLayout is a layout manager that partitions a container into a set of rows and columns. The intersection of a row and a column is called a cell, like in a spreadsheet. Components added to the container are placed in cells. As the container is resized, the cells are also resized. Consequentially, the components inside those cells are resized.

TableLayout - An Alternative to GridBagLayout

Since the core concept of Flutter is Everything is widget, Flutter incorporates a user interface layout functionality into the widgets itself. Flutter provides quite a lot of specially designed widgets like Container, Center, Align, etc., only for the purpose of laying out the user interface. Widgets build by composing other widgets normally use layout widgets.
