Chapter 20 Static Electricity part 1 1. Charging by Friction Charging by friction between objects of different affinities, causes the object with higher affinity for electrons to gain electrons from the other object. The object that has "lost" electrons now has a positive charge.

20.1 Electrical Charge 462 Static Electricity FIGURE 20–1Running a comb through your hair transfers elec-trons to the comb, giving it a negative charge. When the comb is brought close to bits of paper, a charge separation is induced on the paper bits. The attractive electrical force accelerates the paper bits upward against the force of gravity.

CHAPTER 20 Static Electricity
• Static electricity is the study of the behavior of electric charges, including the transfer of charges. • The law of conservation of charge states that the total charge in an isolated system is constant. • Induction is the transfer of charge without contact between materials. Static discharge occurs when a pathway through which charges can

Static Electricity: Problem Set Overview This set of 33 problems targets your ability to determine circuit quantities such as the quantity of charge, separation distance between charges, electric force, electric field strength, and resultant forces and field strengths from verbal descriptions and diagrams of physical situations pertaining to electric circuits.

Physics Chapter 20 Study Guide Static Electricity Answers ... Figure 20–4 shows static charges—charges that are not moving—on an insulator. The strips of tape that you charged earlier in this chapter acted in the same way. Materials through which charges will not move easily are called electrical insulators.
