The key word "same" in this problem means that I am going to set my two expressions equal to each other. When we set the two expressions equal, we now have an equation with variables on both sides. After solving the equation, you find that $x = 30$, which means that after 30 weeks, you and your sister will have the same amount of money.

Below are more complicated algebra word problems Example #6: The ratio of two numbers is 5 to 1. The sum is 18. What are the two numbers? Solution Let x be the first number. Let y be the second number $x / y = 5 / 1$ $x + y = 18$ Using $x / y = 5 / 1$, we get $x = 5y$ after doing cross multiplication Replacing $x = 5y$ into $x + y = 18$, we get $5y + y = 18$ $6y = 18$ $y = 3$

Algebra Word Problems - Basic Mathematics

Problem 7. The sum of two numbers is 72, and one of them is five times the other; what are the two numbers? Here is the equation. $x + 5x = 72$. Here is the solution: $x = 12$. $5x = 60$. Problem 8. The sum of three consecutive numbers is 87; what are they? (Compare Example 4.) Here is the equation. Here is the solution: 28, 29, 30. Problem 9.

In an algebra word problem, you will likely be asked to find a certain value, or you may be asked to find an equation that represents a value. For example, you might have the following problem: Jane went to a book shop and bought a book. While at the store Jane found a second interesting book and bought it for \$80.
