Solution WeuseEuler'sformula: V +F = E +2. (a) ThereareE = V +F 2 = 6 edges. Here'sanexample: (Notethattheouterfaceisalsocounted!) (b) There should be V = E F + 2 = 4 vertices. However, this is not possible without creatingduplicateedges. Withduplicateedges,itispossible,andtheformulagivesthe

The activities are designed to get participants to become familiar with how problems can be simplified into graph theory problems and how that may be used to find solutions. These materials were originally designed for public engagement and do not require much formal mathematical knowledge beyond counting.

Combinatorics - Combinatorics - Applications of graph theory: A graph G is said to be planar if it can be represented on a plane in such a fashion that the vertices are all distinct points, the edges are simple curves, and no two edges meet one another except at their terminals. For example, K4, the complete graph on four vertices, is planar, as Figure 4A shows.
