Test-Driven Development with Python: Obey the Testing Goat ... This guide will take you through the development of an application using Test-Driven Development (TDD). We'll look how and what you should test. We'll use pytest for testing, pydantic to validate data and reduce the number of tests required, and Flask to provide an interface for our clients via a RESTful API. By the end, you will have a solid pattern that you can use for any Python project so that you can have

Modern Test-Driven Development in Python | TestDriven.io Test-driven development (TDD) is one of the popular ways to code and create projects. It revolves around creating tests and then writing the actual code. In this article, we will learn how to do test-driven development in Python. We chose Python because it is simple to learn and implement.

We'll discuss how and when to do commits and integrate them with the TDD and web development workflow. We'll be using Django, the Python world's most popular web framework (probably). I've tried to introduce the Django concepts slowly and one at a time, and provide lots of links to further reading.
